Experiment 11

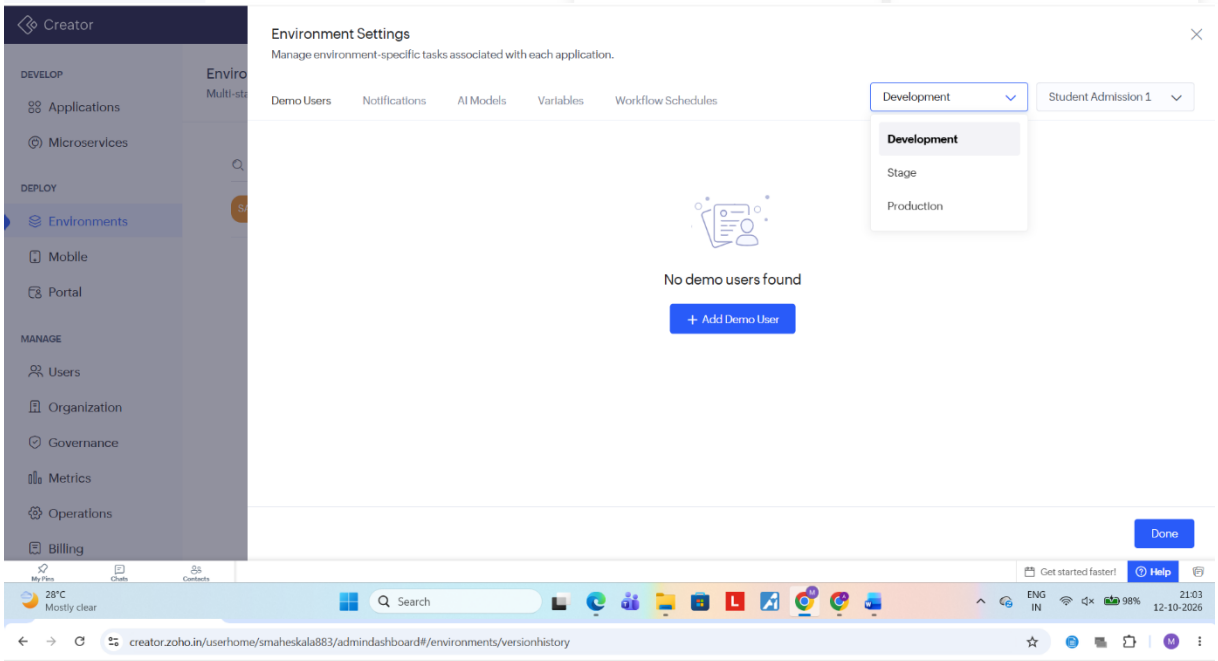

Aim

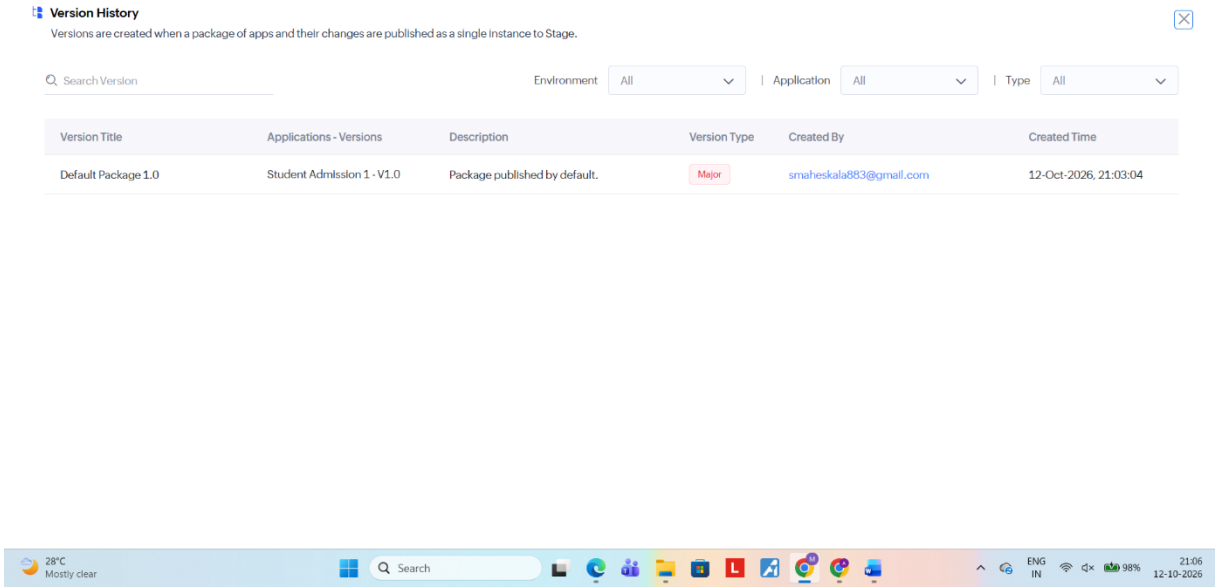

To deploy and migrate the LC-09 – Student Admission application in Zoho Creator from a development environment to a production environment while maintaining its forms, reports, workflows, and data.

Procedure

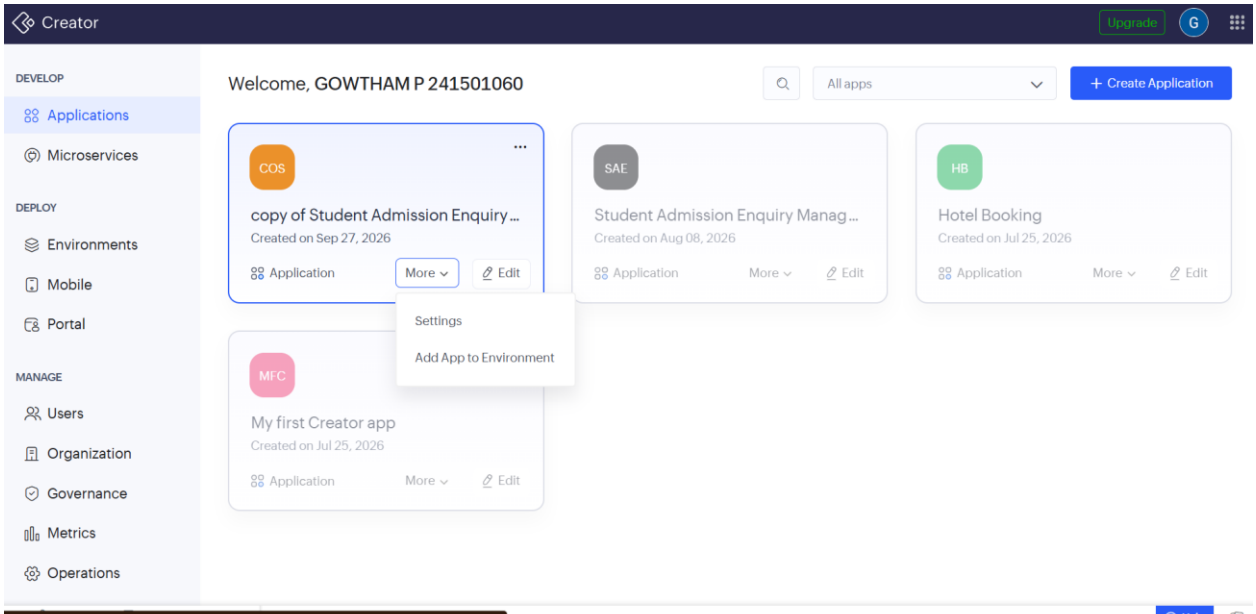

1. Log in to your Zoho Creator account and open the Student Admission application.
2. Prepare the application: Verify all forms, reports, dashboards, Deluge scripts, and workflows.
3. Test the application: Check student registration, admission status updates, email notifications, and seat availability calculations.
4. Back up data: Export or back up the required application data before migration.
5. Package the application: Use the available application deployment or export options to prepare the application for transfer.
6. Deploy the application: Import or publish the application in the target environment using the deployment options available in your Zoho Creator account.
7. Configure dependencies: Verify user permissions, connections, email settings, and other required configurations.
8. Validate the deployment: Test the application in the target environment to confirm that all features work correctly.
9. Complete migration: Confirm that the application and required data are available in the target environment before switching users to it.

Result:

Application deployment and migration are completed successfully when the Student Admission application and its required configurations operate correctly in the target environment.
